Applicant is requested to inform examiner of any related applications or patents and to amend the present specification appropriately.

5 An examination of this application reveals that applicant is unfamiliar with patent prosecuting procedure. While an inventor may prosecute the application, lack of skill in this field usually acts as a liability in affording the maximum protection for the invention disclosed. Applicant is advised to secure the services of a registered patent attorney or agent to prosecute the application, since the value of a patent is largely dependent upon skillful preparation and prosecution. The Office cannot aid in selecting an attorney or agent.

10 Applicant is advised of the availability of the publication "Attorneys and Agents Registered to Practice Before the U.S. Patent and Trademark Office." This publication is for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

15 Claims 1-11 are rejected as failing to define the invention in the manner required by 35 U.S.C. 112, second paragraph.

20 The claim(s) are narrative in form and replete with indefinite and functional or operational language. The compound claim 4 does not define a compound, the method claims do not define any method. The claim(s) must be in one sentence form only. Note the format of the claims in the patent(s) cited.

25 The claims are not in condition for examination and a complete and proper search is impossible. Upon receipt of proper claims, further prosecution will be possible.

30 In claim 1 "a protein activity dependent light emitting component" and "a substrate concentration depend[e]nt light quenching component" are indefinite as to what is intended. In claim 2, "a donor particle comprised of fluorescent lipid" and "a

colorimetric assay specific for neutral lipids" are not understood as to what is intended. In claim 3 "a turbidometric assay specific for a protein" is not understood as to what is intended. Claim 4 is entirely not understood as to what is intended.

The title of the invention is not aptly descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following prior art pertinent to applicant's disclosure is made of record and not relied upon:

Brocia (5,459,567, 5,585,235, 5,618,683) teach enzyme assays, Shultz (5,580,747) teaches an enzyme assay.
